

# Behavior Analysis of Twitter Users

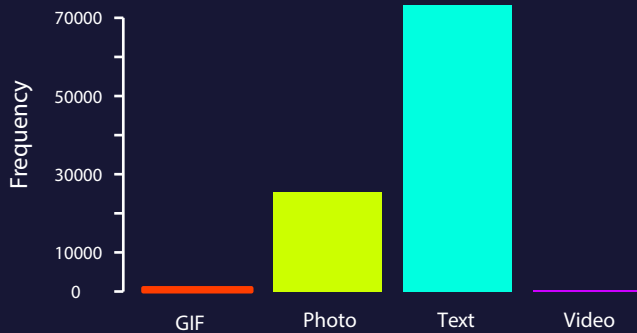

Group Member: Srija Nair, Haoxuan Shi, Jianyi Liu

The dataset is about tweets related to climate change, our analysis is based on the following two questions.

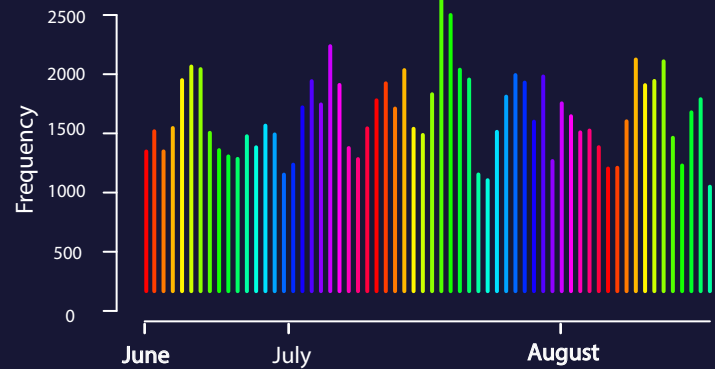

Q1: How does the tweet vary over time?

Q2: How different media affect the retweet frequency?

**Different Types of Tweets**

**Rate of Daliy Tweets**

Q1: How does the tweets vary over time?

The users on Twitter have three actions: Tweet, Reply and Retweet. Most of users have tweeted about climate change, but few users have been replying and retweeting to those tweets.

Q2: How different media affect the retweet frequency?

The users are more likely to retweet and reply the tweets which only have text and photos. The tweets having GIF and videos regarding climate change were less retweeted and replied.

Besides, users prefer to retweet than reply.
